

Massive delivery

Since Dec. 2003 **Industrial Asphalt/KBDJ** has been mining in KBDJ's Nehemiah quarry located in Buda in order to produce necessary materials for construction projects of all sorts.

"This quarry is a great source for quality limestone. Currently it's providing the material for the SH 130 toll road. Additionally, several projects in Kyle and Buda have benefited from this source," says **Jill Shackelford**, president for Industrial Asphalt.

"It's great that our material is being used locally. It's close, which saves transportation costs, which saves on emissions."

Considering this concern, Industrial Asphalt/KBDJ recently added to their family of construction machinery, purchasing equipment under the TERP (Texas Emission Reduction Plan) under the direction of the TCEQ (Texas Commission

The machines make their way down the Nehemiah quarry.

Environmental Quality).

Chuck Williams, Texana Machinery, who assisted in the delivery of these massive pieces of equipment, has been quite impressed with the operation and management of the quarry, noting that Industrial Asphalt/KBDJ has gone to extraordinary lengths to be good neighbors to those who reside near this quarry.

The brothers lined up

"I have been to every quarry and mine in central Texas and have never seen an operation run so meticulously to be environmentally friendly," Williams says.

As the large machines made their

way down the quarry, Williams noted that the machines' big brother, a Kawasaki 115ZV-2 loader, which had been purchased in March 2007, was waiting for his little brothers to arrive. —va
